MANN+HUMMEL takes over membrane specialist Ultra-Flo in Singapore

Strengthening of non-automotive activities

Strategic acquisition: With the takeover of Ultra-Flo, MANN+HUMMEL is expanding its technological base and market access in the field of water filtration. Ultra-Flo employs 60 people in R&D, sales and production of membranes for filtration systems and will have a turnover of approx. EUR 10 million in 2010.

Ludwigsburg/Singapore, 29th July 2010 – On 1 September 2010, MANN+HUMMEL FILTER TECHNOLOGIES (S.E.A.) Pte. Ltd will acquire a 100% holding in the Singapore-based company Ultra-Flo Pte. Ltd. from Oilfield Technical Services Pte. Ltd. Ultra-Flo develops and produces membranes and membrane systems for water, waste water and process water. The regional focus of the company's business activities is in South East Asia. Customers come from industry, the communal sector and trade businesses.

"With Ultra-Flo we are expanding our technological base and our product portfolio. With the new reference products we are accelerating our market access in the field of water filtration", says Ulrich Winter, managing director of MANN+HUMMEL Singapore, with responsibility for the new company. "This acquisition is an important strategic step for the expansion of our water business."

In 2009, MANN+HUMMEL founded its Water Division, with headquarters in Singapore. The global market volume for products and solutions for water treatment is approx. EUR 18 billion and is continually growing. Industry, agriculture and households all need clean water in large quantities and also produce waste water. Given the rise in the world's population, innovative technologies are required for the treatment of water. Membranes such as those from Ultra-Flo form the core of MANN+HUMMEL water filtration solutions. They eliminate germs, bacteria and viruses by purely physical methods.

MANN+HUMMEL, development partner and series supplier to the international automotive and mechanical engineering industries has set itself the target of a disproportionate expansion of its activities in the non-automotive field, in order to reduce its dependency on the automotive sector. The expansion of the Water Division, initially in South East Asia, is a step in this direction. In the medium term, MANN+HUMMEL will also offer solutions for water treatment in other regions, such as in the NAFTA countries, which also have high rates of growth in this field.

(approx. 2,400 characters including spaces)

About MANN+HUMMEL

The MANN+HUMMEL Group is a development partner and original equipment supplier to the international automotive and mechanical engineering industries. Employing 11,800 people at 41 locations world-wide, the company achieved turnover of 1.67 billion Euros in 2009. The Group's product portfolio includes air filter systems, intake manifold systems, liquid filter systems, cabin filters and cylinder head covers made of plastic with many integrated functions for the automotive industry, as well as filter elements for vehicle servicing and repair. For general engineering, process engineering and industrial manufacturing sectors the company's product range includes industrial filters, a series of products to reduce carbon emission levels in diesel engines, membrane filters for water filtration, filter systems and complete lines as well as units for conveying, dosing and drying of free flowing plastics.

Mann+Hummel acquires Ultra-Flo

A new beginning for MUSG

▶▶ A water solution provider.

- Headquartered globally in Singapore
- Market presences in S.E.A and Australia
- 71 staff strength
- Develop and manufacture of proprietary membrane fibers, cartridges and systems for the treatment of water and wastewater
- Provider of water and wastewater treatment services

Water is life. We make water clean and safe.

- MANN+HUMMEL ULTRA-FLO Water Filtration solutions:
customer / operator orientated and reliable.

- MANN+HUMMEL ULTRA-FLO (MUSG) offers high quality membrane and systems covering a wide range of application
- With a team of dedicated engineer and sales personnel, we strive to give our utmost service to every customer

The future poses many questions. Our specialists are working on the answers.

- From idea to product launch. More than 700 people at MANN+HUMMEL Research participate in developing fully integrated outfit

- Material Formulation
- Fibre Production
- Cartridge Assembly
- System Integration
- Technical Follow up
 - Service & Maintenance Contract
 - BOO Contract

Water is life. We make water clean and safe.

►► Integrating MANN+HUMMEL ULTRA-FLO membranes

- MANN+HUMMEL ULTRA-FLO (MUSG) membrane provides additional porosity with increase voids whilst retaining the structural strength with center rib
- Chemically stable material provides the resistance to toxic and corrosive environment

Water is life. We make water clean and safe.

►► Advantages of our membranes

- It allows for flexible operation in both the Cross-Flow and Dead-End mode of filtration
- Its hydrophilic surface allows low fouling tendency
- Operating at low pressure, it reduces the operating cost and energy consumption

Modified PAN vs others (in house test)

Hollow Fibre Membrane	PAN (modified)	PES	PVDF
Pore Size (D90)	~ 25nm / good	10 to 20 nm / excellent	10 to 50 nm / fair
Fouling Behavior	Relatively Less	Medium	Relatively High
Chemical Stability	Good	Good	Excellent
Mechanical Strength	Good	Fair	Good
Flux performance (clean water lmh @ 1 bar)	650 – 750	450 – 550	200 – 250
Membrane Cost	1+	2+	3.5+

U 860 CARTRIDGE

Configuration	Hollow Fibre (Out to In Filtration)
Material	Hydrophilic modified PAN
Fibre Size	2.0mm OD
Surface Area	480 sq ft
Cartridge Housing	8 " Diameter x 60 " Length
Weight	40 kg
Operating Temperature	< 45 °C
Operating Pressure (TMP)	< 8 psi (Feed); <14 psi (Backflush)
pH	3 ~ 9 (Operating); 2 ~ 11 (Washing)
Flow/Flux Rate:	
City Water	2 - 3 m³/h
River/ Bore	1 – 1.5 m³/h
Treated Wastewater	0.5 - 1 m³/h

Filtration (Out to In)	Re-generation (In to Out)
Dead End Mode	Air Scouring with Backflushing

* Subject to feed water condition

Note: Ultra-Flo Pte Ltd reserves the right to make any changes to the information provided above without prior notice.

**Water is life.
We make water clean and safe.**

►► MANN+HUMMEL ULTRA-FLO Water filtration systems.

Klar System (Ultrafiltration)

**Water is life.
We make water clean and safe.**

►► Klar System

Klar System (Ultra filtration)

- Remove sub micron particles
- Low power consumption
- High durability and stability

Especially suitable for

- Colloidal and suspended solids removal including bacteria, spores and parasites.
- River, well, surface water clarification to potable water
- Pre-treatment of RO
- Final polishing of biologically treated water

Water is life. We make water clean and safe.

►► MANN+HUMMEL ULTRA-FLO water filtration systems

Mem-Bio System (Membrane Bioreactor)

- Removes suspended solids and micro-organisms using hollow fibre membranes
- Saves more than 50% space compared to conventional sludge treatment systems (STP)

Especially suitable for

- Remote, decentralise sewage treatment requirement
- High organic contaminant water

**Water is life.
We make water clean and safe.**

►► MANN+HUMMEL ULTRA-FLO water filtration systems

B - 100

B-5

B - 50

**Water is life.
We make water clean and safe.**

►► MANN+HUMMEL ULTRA-FLO Water filtration systems.

Rev-O-System (Reverse Osmosis)

**Water is life.
We make water clean and safe.**

►► Rev-O System

Rev-O System (Reverse Osmosis)

- High salt rejection with high flow rates
- Using dependable reverse osmosis technology and dependable PA (Polyamide) membranes
- Energy Recovery

Especially suitable for

- Seawater, Bore Hole Water / Brackish water
- Industrial Waste Water recycling
- Industrial Process Water

ROCHOR CANAL, SINGAPORE

MBR 50 was commissioned by PUB in this trial project to improve the quality of the Rochor Canal water. As the water from the canal flows directly into the Singapore River and the Marina Barrage reservoir --- the quality of the water has to be controlled. The MBR 50 was able to reduce the TSS, COD, BOD and harmful micro organism population in the water.
