LINK-PIPE[®]

Manufacturer of No-Dig Pipe Repair Products

Aplicações com Luvas de Aço Inoxidável

Tubulação quebrada

Luva com vedante (Grouting Sleeve[™]) para reparo estrutural

Antes – Vazamento com alta vazão

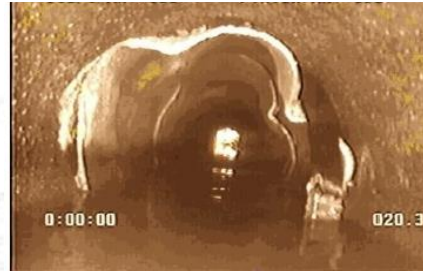

Depois – Reparo completo usando Sewer Sealer[™]

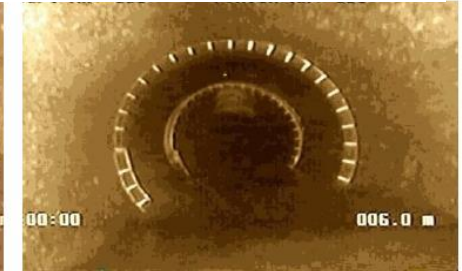

Grouting Sleeve[™] instalada

Se um desalinhamento não pode ser corrigido, a tubulação pode ser escareada e uma Grouting Sleeve[™] pode corrigir a lacuna

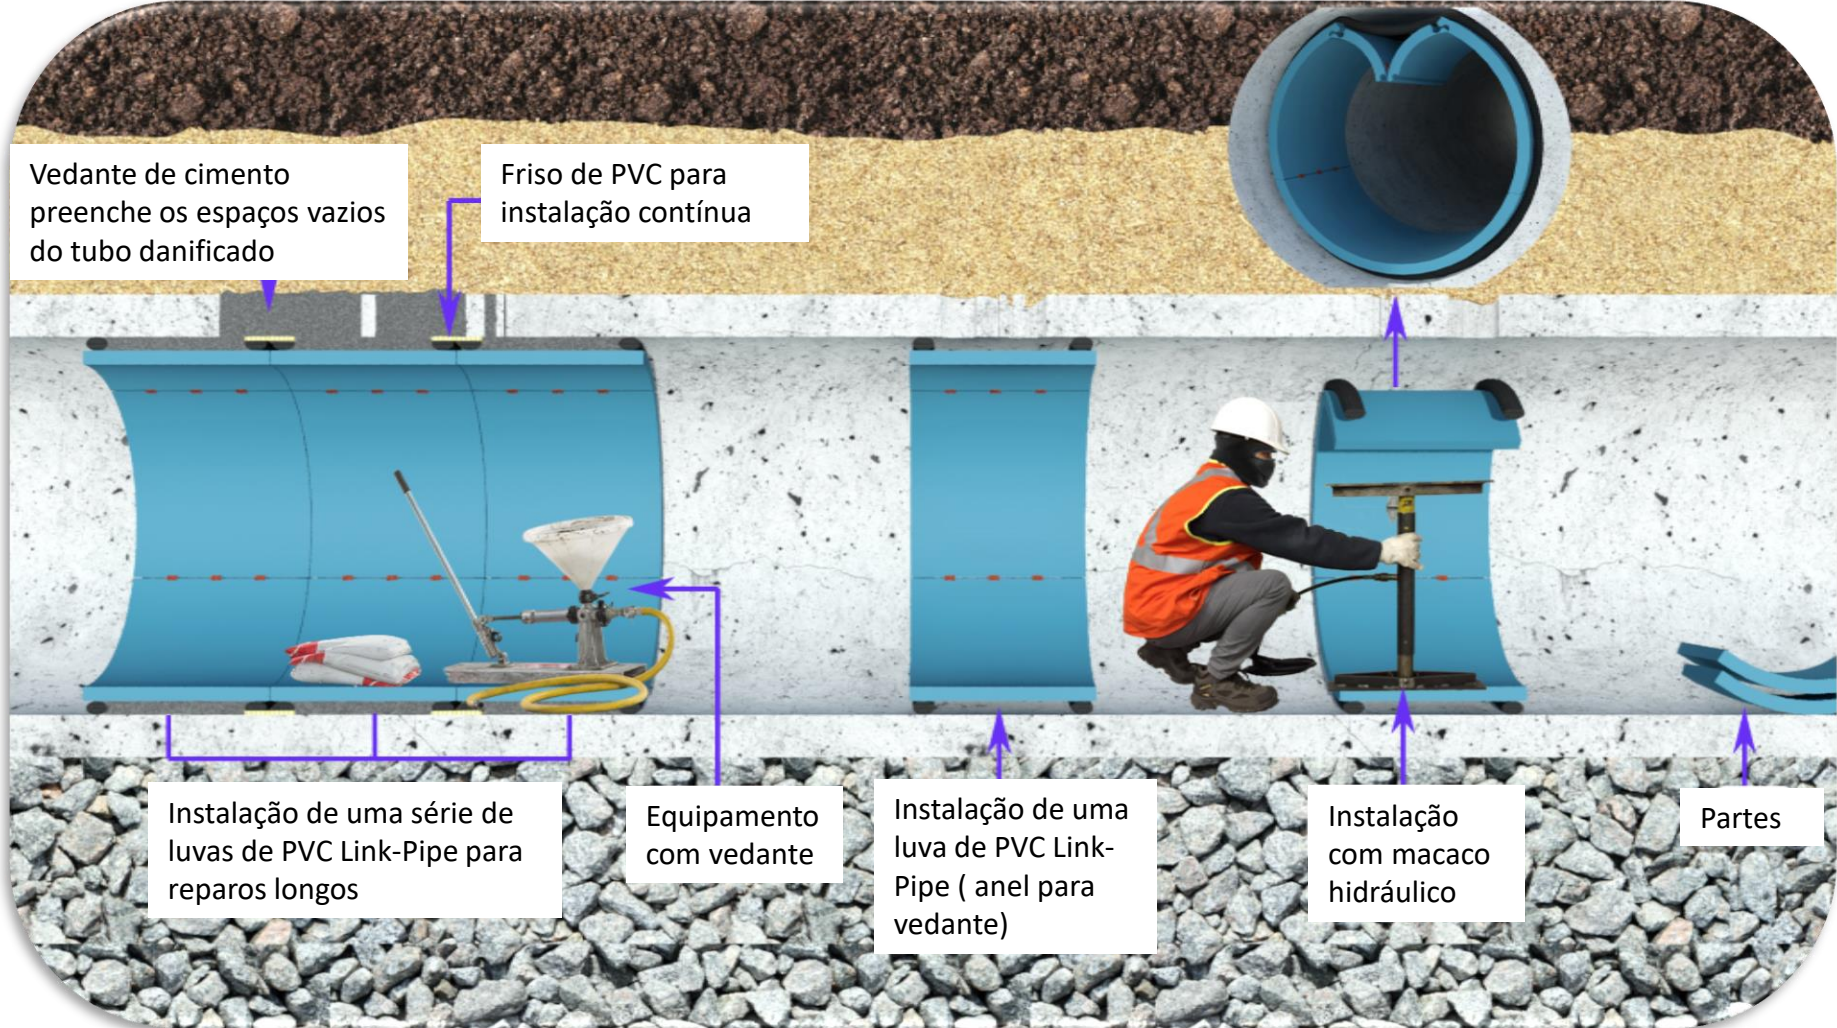

Muitos revestimentos não aderem à tubulação, resultando em reparos com vazamento, deformação ou colapso. Esses problemas são facilmente corrigidos com Grouting Sleeves[™].

A versão End Sealer[™] das luvas com vedante foi instalada nas duas terminações do revestimento deformado (colocado em um reparo anterior).
